I want to know how I would recognize you if I saw you walking quietly down the street toward me when you were off duty." somewhere the other night.. "Easily," said Amos. "I have red hair, I have freckles, I am five feet, seven inches tall, and I have brown eyes. All you need do is go to Hidalgo who owns the Mariner's Tavern and ask her who has red hair, is so tall, with such eyes, and she will tell you, 'It is her own darling Amos.' And Hidalgo's word should be proof enough for anybody. "Pssst," he said, "You colorful but uninteresting person, wake up and talk to me." How Swyley did what only he did so well was something nobody was quite sure of, least of all Swyley himself. Whatever the reason, Swyley's ability to pick out significant details from a hopeless mess of background garbage and to distinguish consistently between valid information and decoys was justly famed and uncanny. But since Swyley himself didn't understand how he did it, he was unable to explain it to the systems programmers, who had hoped to duplicate his feats with their image-analysis programs. That had been when the "-sits" and the "-zoologists" began their endless batteries of fruitless tests. Eventually Swyley made up plausible-sounding explanations for the benefit of the specialists, but these were exposed when the programs written to their specifications failed to work. Then Swyley began claiming that his mysterious gift had suddenly deserted him completely.. "Not lately. "No, I am not saying that SP3 could be modified from a robot craft to carry a human crew. The design could not feasibly be modified at this late stage. Too many things would have to be thought out again from the beginning, and such a task would require decades. And yet, nothing comparable to SP3 is anywhere near as advanced a stage of design at the present time, let alone near being constructed. The opportunity is unique and cannot, surely, be allowed to pass by. But at the same time we cannot afford the delay that would be needed to take advantage of that opportunity. Is there a solution to this dilemma?" He looked around as if inviting responses. None came.. "You have done very well," said the grey man pointing to the wall where he had hung the first two pieces of the mirror together. Now they could make out what the shape of the third would be. "And if you get the last one, you will have done very well indeed." Major Thorpe, Electronics Intelligence Officer at Brigade H.Q., had read somewhere that spinach and fish were sure remedies for failing eyesight, so he placed Corporal Swyley on an intensive diet. But Swyley hated spinach and fish even more than he hated being tested, and within a week he was afflicted by acute color-blindness, which he demonstrated by refusing to see anything at all in even the simplest of training displays.. people of this notion; even a surprising amount of scientific proof is not of this kind. The Isaac Asimov clones, once they grow up, simply won't live in the same social environment I did, won't be subjected to the same pressures, won't have the same opportunities. What's more, when I wrote, I just wrote? no one expected anything particular from me. When my clones write, their products will always be compared to the Grand Original and that would discourage and wipe out anyone. This fertilized egg cell cannot become an independently living organism for some nine months, for it must divide and redivide within its mother's womb and be nourished by way of its mother's bloodstream. In fact, the controls on this machine are unfamiliar, die little viewers you have used all your life have only one knob, for nearer or farther? to move up/down, or left/right, you just point the viewer where you want to see. This machine has dials and little windows with numbers in them, and switches and pushbuttons, most of which you don't understand, but you know they are for special purposes and don't matter. The main control is a metal rod, right in front of you, with a gray plastic knob on the top. The knob is dull from years of handling; it feels warm and a little greasy in your hand. The console has a funny electric smell, but the big screen, taller than you are, is silent and dark. You can feel your heart beating against your breastbone. You grip the knob harder, push it forward just a little. The screen lights, and you are drifting across the next room as if on huge silent wheels, chairs and end tables turning into reddish silhouettes that shrink, twist and disappear as you pass through them, and for a moment you feel dizzy because when you notice the red numbers jumping in the console to your left, it is as if the whole house were passing massively and vertiginously through itself; then you are floating out the window with the same slow and steady motion, on across the sunlit pasture where two saddle horses stand with their heads up, sniffing the wind; then a stubbled field, dropping away; and now, below you, the co-op road shines like a silver-gray stream. You press the knob down to get closer, and drop with a giddy swoop; now you are rushing along the road, overtaking and passing a yellow truck, turning the knob to steer. At first you blunder into the dark trees on either side, and once the earth surges up over you in a chaos of writhing red shapes, but now you are learning, and you soar down past the crossroads, up the farther hill, and now, now you are on the big road, flying eastward, passing all the cars, rushing toward the great world where you long to be. associating them with Maggie of the green sofa, Barry found himself liking the MacKinnons enormously, Singh and everyone else was silent for a while. First a breeze merely tugged at their collars. Then rougher gusts began to nip their fingers. At last buffets of wind flattened them against the rock one moment, then tried to jerk them loose the next. The rope was very useful indeed, and neither one complained.
